

Founded in 2008, Karna LLC is focused on providing science, research, technology, and communications solutions and services to the government.

Karna, LLC is a rapidly growing business providing health services to the government including 37 active contracts at CDC. Karna has several active projects supporting information management, data systems development and related services. We are fully versed in the CDC EPLC process for systems design and development.

Our team draws on the strengths of an experienced staff with deep functional and innovative resources.

**Advantages:**

- Local leadership creates responsive action.
- Experience providing a breadth of services to HHS including strategy, research, implementation, production, and evaluation

Improving the population's health through transformational strategies, evidence-based approaches, and effective technologies.

## Information Technology for Science and Health

**IT in support of programs** – Karna is led by seasoned professionals who understand IT and its role in public health and science. Our projects deliver products and services that integrate with and service the programs and stakeholders they are intended for. We integrate our IT expertise, exceptional project management, and a profound understanding of scientific and health programs. The result are projects that deliver.

**Systems Development and EPLC** –The Karna Team is experienced in all common development frameworks (e.g. agile, waterfall, spiral, incremental, hybrid). We assess each project to determine the best approach based on the specific project environment and stakeholder needs. We document the system, and keep documentation current to ensure its accuracy throughout the process. Karna has experience working within the HHS EPLC framework - using tailored artifact templates and following the process to create the documentation needed for ongoing and Stage Gate Reviews.

**Operations and Maintenance** - Karna supports and maintains several CDC systems and end-users after live use. Our staff can provide "help desk" style end-user support to solve issues via phone or email in a timely, accurate, and comprehensive manner. We establish and use documented processes (e.g., user access reset); escalation procedures; performance standards; and performance reporting based on the timeliness and quality of our responses.

**Training and User Support** – We have experience using diverse training delivery methodologies, including distance-learning technologies (e.g., Web-based techniques) and more traditional approaches (e.g., on-site training sessions with follow-up coaching). We integrate multiple learning style theories into every aspect of training and materials design to yield measurable results.

**Some Sample Projects:**

**CDC DASH Performance Evaluation Reporting System**– A full lifecycle web-based information system development; Section 508 compliance; EPLC framework; OMB clearance; maintenance and end-user support.

**CDC NCDEH Healthy Homes Lead Poison Surveillance System** – Covered development, system maintenance, modernization, and support for HHLPS – a web-based system, and CBLIS – a modern desktop application.

**CDC CGH SharePoint Development** – Karna provides project management through full lifecycle web-based solution development; SharePoint programming; solution maintenance, and end-user training and support of a proficiency testing program and quality assurance. Karna staff regularly travel in-country to provide support to these important programs.

## Contracting with Karna, LLC

### CORE VALUES

We live our values daily in our work with our clients, partners, and staff.

- Integrity
- Excellence
- Results-Focused
- Professionalism
- Open and Honest Communications
